Personal Summary

Versatile Software Engineer passionate about building systems that are both intelligent and lightning-fast. Blends a deep understanding of cloud architecture, distributed computing, and ML integration with a creative, problem-solving mindset. Proven record at Amazon and Kanopy delivering scalable, high-impact solutions that drive performance, reliability, and real-world results.

Skills

Programming Languages: JavaScript, TypeScript, C, C#, C++, PHP, Python, Java, HTML, CSS, SQL **Development:** Git, Jira, Confluence, Docker, REST APIs, machine learning, data pipelines
Frameworks: Nest.js, Vue.js, Nuxt.js, Django, Next.js, **Methodologies:** Scrum, Agile
AWS (Lambda, ECS, S3)

Work Experience

10/2024 - Current

Amazon – Santa Monica, California

Software Development Engineer II

- Designed and implemented distributed agent workflows automating xBR operational pipelines, reclaiming 4+ hours of PM bandwidth weekly and improving cross-service data validation accuracy.
- Developed and deployed ML-driven experiments for Marketing & Discoverability using AWS Lambda, Python, and internal experimentation frameworks, enhancing personalization and merchandizing optimization for millions of customers.
- Acted as Privacy Bar Raiser, conducting security audits, driving compliance initiatives, and mentoring teams on data governance, GDPR alignment, and secure software design principles.
- Collaborated with cross-functional teams to architect scalable cloud microservices and improve system reliability (SLA 99.99%) under high-traffic workloads.

02/2021 - 10/2024

Kanopy – San Francisco, CA

Software Development Engineer I

- Architected fault-tolerant serverless data ingestion systems in TypeScript (Nest.js) and AWS Lambda, achieving 98% reliability processing external supplier content.
- Optimized cloud storage and post-processing pipelines using AWS S3 and ECS, cutting latency and improving file delivery times by >60%.
- Deployed scalable containerized services with Docker and AWS ECS, reducing system errors from 2000+ per day to near zero post-deployment.
- Automated video captioning pipelines with Nuxt.js, Python, and FFmpeg, reducing manual editing time by 80% and streamlining accessibility workflows.
- Engineered API synchronization microservices integrating multiple third-party data sources, improving data throughput and operational efficiency by 4+ hours per user daily.
- Redesigned versioning and asset management systems, improving content publication throughput by 150% YoY and ensuring CI/CD release stability.

10/2019 - 05/2021

HeadMind – Paris, France

Project Manager

- Oversaw software automation initiatives for a major European telecom operator, orchestrating deployments for 4M+ consumer devices with zero downtime.
- Led Agile development teams across QA, DevOps, and product delivery, driving continuous integration and deployment (CI/CD) improvements.
- Defined quality assurance frameworks, acceptance criteria, and process documentation, increasing deployment velocity and test coverage while reducing operational overhead.
- Consulting Firm

02/2018 - 02/2019

Kanopy – San Francisco, CA

Backend Software Engineer

- Developed backend systems in PHP, Python, and SQL for ERP, billing, and analytics, improving data processing efficiency by 20%.
- Modernized legacy architectures with Drupal and RESTful APIs, achieving 15% faster response times and enhanced scalability.
- Directed end-to-end project lifecycles through Agile sprints, code reviews, and testing pipelines, resulting in 25% faster delivery times.
- Built cross-platform media applications using TypeScript and Vue.js for Amazon Fire TV and Smart TVs, increasing user engagement by 30% and satisfaction by 40%.
- Served as technical lead for API integration and automation, cutting manual data handling by 20% and strengthening system reliability and observability.

03/2016 - 01/2018

Cristal – Paris, France

Treasurer

- Managed financial operations and software project lifecycles for EPITA's junior enterprise, coordinating client relations, accounting automation, and software delivery.
- Delivered technical workshops and mentorship programs to upskill junior developers in JavaScript, C++, and Agile methodologies.
- Freelance Work for Students

04/2017 - 12/2017

Paris, France

Software Engineer Intern

- Engineered an Augmented Reality visualization platform using C#, Unity, and HoloLens SDK, enabling 3D interactive diagnostics for aircraft engine systems.
- Integrated real-time 3D rendering and data streaming pipelines, establishing the foundation for immersive training simulations used by engineering teams.

Education

2013-2018

Ecole Pour l'Informatique et les Techniques Avancees Paris, France

Master of Engineering: Multimedia and Information Technology, Global Economics and Geopolitics

2016

California State University of Monterey Bay

Academic Exchange
